Concur Expense

Shubhendu Vimal

What is Concur Expense?

92M users · 46,000 organizations · 1B+ expense transactions a year · #1 in IDC MarketScape T&E 2025

Customers aren't buying receipt capture — they're buying control.

Expense reporting is merely the mechanism.

Spend visibility

Every dollar, visible in real time

Policy enforcement

Rules applied automatically, up front

Compliance

Audit-ready records by default

Financial control

Limits, approvals, and GL posting

COMPETITORS

Navan

Unified Travel & Expense

Ramp

Smart Spend & Card Management

Expensify

Traditional Expense Automation

Brex

Corporate Cards & Spend

THE MOAT

Card-first challengers win on UX and automation. Concur wins on enterprise compliance, global tax, and deep ERP integration.

Source: SAP Concur (2025) · IDC MarketScape 2025 · competitive set per public comparisons

One expense report. Three customers. Three different definitions of success.

CONVENIENCE

CONTROL

USES

Employee

Primary User

CORE JOB

Submit expenses quickly and accurately.

BIGGEST FRUSTRATION

Expense reporting steals time from revenue-generating work.

SUCCESS METRIC

Minutes spent on expenses.

GOVERNS

Manager / Approver

Influencer · Governance Layer

CORE JOB

Review and approve spend efficiently.

BIGGEST FRUSTRATION

Reviewing low-risk expenses creates approval fatigue.

SUCCESS METRIC

Exception rate.

OWNS

Finance & Admin

Economic Buyer · Owner

CORE JOB

Control spend, enforce policy, and maintain audit readiness.

BIGGEST FRUSTRATION

Discovering policy violations after money has already been spent.

SUCCESS METRIC

Policy leakage prevented.

THE STRATEGIC TAKEAWAY

Although employees are the primary users, Finance is the economic buyer. Any product strategy that improves employee UX without improving financial control will struggle to justify enterprise adoption.

The moat isn't expense reporting. It's controlling the entire spend lifecycle.

CONCUR CONTROLS EVERY STAGE

From an employee's first swipe to a trusted financial record — one system governs every stage.

WITHOUT CONCUR

WITH CONCUR

Single source of truth

THE MOAT

Competitors automate parts of the workflow. Concur owns the system of record.

Every expense passes through policy checks, approvals, accounting controls, audit trails, and ERP integration before it becomes a trusted financial record — across global tax and compliance regimes rivals can't easily replicate.

THE COST OF THE STATUS QUO

Every expense report is a quiet tax on the business.

Concur digitized expense reporting — the economic burden never left.

Automation does the same work for under \$10 a report. The waste is a choice, not a constant.

Source: GBTA Foundation — “Expense Reporting: Global Practices and Pain Points”

Expense reporting is still reconstruction work.

The friction isn't isolated — it appears at every stage of the workflow.

WHAT CONCUR ALREADY KNOWS

- ✓ Card transaction
- ✓ Receipt
- ✓ Travel booking
- ✓ Policy

YET HUMANS STILL:

- ↻ Categorize
- ↻ Justify
- ↻ Reconstruct
- ↻ Submit

WORKFLOW EVIDENCE

- ✗ **Capture** Receipts fail to sync
- ✗ **Categorize** Auto-fill requires correction
- ✗ **Submit** Re-entry still required
- ✗ **Approve** Approvals stall
- ✗ **Reimburse** Slow processing

If Concur already knows the transaction, receipt, travel context, and policy, why is the employee still doing the reconstruction?

The problem is systemic — not one broken feature, but human effort embedded throughout the workflow.

Why SAP Concur is uniquely positioned to win

THE MOAT — five layers a challenger must replicate

Global Compliance

Tax, audit & regulation across geographies

ERP Integrations

Posts to the financial system of record

Approval Workflows

Routing, delegation, governance

Policy Engine

Rules, limits & per-diems enforced

Spend Data

Every transaction, receipt & card feed

Many companies can automate expenses.

Few can do it while preserving enterprise trust.

Each layer is years of data, integrations, and compliance work — not a feature a challenger ships in a quarter.

THE RESULT Automation customers actually trust.

The future workflow

Same outcome — the work shifts off the human.

CURRENT

Every step is the human's.

1  Employee collects receipts

2  Employee creates the report

3  Employee submits

4  Manager reviews

5  Finance audits

FUTURE

Concur does the work; humans handle exceptions.

1  Spend occurs

2  Concur understands context

3  Concur assembles the report

4  Manager reviews exceptions

5  Finance receives a trusted record

HUMAN STEPS 5 → 2 The employee's three steps disappear.

From reconstruction to trusted autonomy

[▶ View Live Prototype](#)

PHASE 1

Reduce Reconstruction

- Better categorization
- Better policy reasoning
- Better explanations

OUTCOME
Less manual effort

PHASE 2

Eliminate Routine Reconstruction

- Auto-file routine expenses
- Auto-generate documentation
- Auto-submit compliant reports

OUTCOME
Most reports require no employee action

PHASE 3

Exception-Only Workflows

- Managers review exceptions only
- Finance reviews exceptions only

OUTCOME
Humans govern uncertainty, not routine spend

PHASE 4

Spend Intelligence

- Predict policy violations
- Recommend policy changes
- Surface spend anomalies
- Highlight budget risks

OUTCOME
Move from recording spend to influencing spend

RECONSTRUCTION ↓ HUMAN EFFORT ↓ BUSINESS VALUE ↑

Concur's evolution is not AI for expense reports. It is the gradual removal of expense reporting as a task.
